

Regarding petition 04-160, I am urI urge you to not limit the ability of satellite based radio services to transmit useful and safety related resources such as traffic and weather reports. I live in San Diego California and find that reception to standard AM and FM signals is often degraded and requires constant changing of radio channels. Satellite radio is a service that I pay for and do so because of its continuous availablility of signal reception.

I urge you to reject NAB's petition number 04-610.
